Dual Vacuum Motors	120/60HZ 220/50HZ
Dual HEPA Filters	99.97% down to 0.3 microns
HEPA Pre-filter bag	98.3% efficient down to 5.0 microns
HEPA Filtered Shop Vacuum	99.97 % down to 0.3 microns

Advanced Patented Design

For your convenience, the Standard Robot brush is designed to maneuver and handle with ease. Take the Standard system wherever you need it go. This technology has serviced two million homes in this industry for nearly two decades.

Hose and Brush System

The Standard Robot brush system is complete with a hose and brush that work simultaneously together leaving [clean ducts](#) behind. The process begins when the rotating brush works at a pace of 450 rpm to scrub the inside walls of the air ducts. As the debris is loosened, it is then vacuumed up in the nozzle located behind the head of the brush. Because Robot brush keeps you in mind, the rotating cable is safely tucked away in the hose, so every type of duct application can be cleaned using a Robot brush system -- even flex duct.

Heavy-Duty Body

The Standard Robot brush is not only powerful, but also durable. Constructed with fiberglass and completed with a gel-coat finish, this system is prepared for hard work. The one-piece steel base is heavy duty and stable with a powder-coated finish.

Adjustable Handle

The Standard Robot brush is designed for any space. Whether you need it to fit in tight spaces or an open area, the Standard Robot brush can handle it all. It also comes with an adjustable handle that is easily collapsible for ease of fit in your truck or vehicle.

Large-Diameter Rear Wheels

Robot brushes products are made with durability in mind. To provide a stable foundation, the semi-pneumatic, 12-inch diameter tires and solid steel wheels give the Standard Robot brush the stability it needs.

Lockable Casters

The five-inch industrial casters on the Standard Robot brush allow for easy access in all areas of the home, from small spaces to open layouts. With the ability to turn 360 degrees on its center axis, using the Standard Robot brush is as easy as counting to three. When you're ready to use the machine, you can lock the casters, keeping Robot brushes in place.
